

Liquid facelift and browlift

Reduce the signs of ageing by replacing lost fats in the face with dermal fillers and botulinum toxin.

Non-surgical facelifts and browlifts

Mid-forties is a turning point for a lot of women, the facial plumpness starts to disappear leaving wrinkles and an older appearance.

Elaine is skilled in the use of fillers and can also use surgical techniques to rebuild the lost fats. Fillers are safe and suitable products. The skin is filled out and wrinkles drastically reduced whilst restoring the face with a youthful plumpness.

This is not a permanent solution and the effects do vary as to how long they last. Generally the effects can last between 2 and 6 months.

If you would like a longer lasting procedure and would contemplate surgery - Elaine is highly skilled in restoring the lost fats with actual fats. This surgical procedure offers the benefits of fillers without having to repeat the procedure several times a year. Click [here](#) to see more about fat grafting as a surgical facelift alternative.
